Scientists

Dr. Herbert Scoville Jr., deputy director of the super secret U. S. Central Intelligence Agency, reported last week that the Soviet Union has 1.5 million graduate scientists, compared with 1.5 million in the United States. This [illegible] lack in the United States science area should not be surprising to anyone who [illegible] Justice William O. Douglas' book, Russian Journey, published more than a year ago. Douglas noted that the Russian student entering the equivalent of [illegible] engineering colleges would have had five years of physics and four years of chemistry in high school (secondary).

These figures tend to [illegible] the reports from Chicago [illegible] high school administrators that in the USSR the requirements to enter college are five times stiffer than the requirements to enter American "easy" colleges, like [illegible].

Reduced to its basic elements, the Russian course of study emphasizes the exact sciences, while the American schools go in for the social sciences with stress getting along with and helping others. Russia is materialism.
